

01

The AG Tesseract

An immersive website storytelling concept for AG Designs:
from fragmented brand noise to strategic clarity.

Claude Prompt: The AG Tesseract

Act as an award-winning creative director, brand storyteller and immersive digital experience designer.

I am creating a new website for my creative and social media agency, AG Designs. I do not want a conventional agency website made up of a hero banner, service cards, an About Us section and a portfolio grid. I want the visitor to experience a cinematic, interactive journey that tells the story of what AG Designs does.

The visual and experiential benchmark is Lusion.co, particularly its use of scroll-led storytelling, 3D environments, transitions, motion and interaction. However, do not copy Lusion's layouts, visual assets, language or concepts. Create an original narrative world for AG Designs.

The central concept: The AG Tesseract

Before discovering AG Designs, a brand is floating in a confusing digital universe.

- Its identity is fragmented.
- Its communication lacks direction.
- Its content exists, but does not connect.
- Ideas are scattered everywhere, but nothing feels cohesive.
- The brand is present, but it is not positioned.

The visitor then discovers the letter A from the AG Designs identity.

The A is not merely a logo. It is an aperture - a doorway into another dimension.

As the visitor moves towards the A, they are pulled through it and enter the AG Tesseract: an endless, multidimensional creative space where strategy, ideas, design, content, storytelling and technology coexist.

Inside the tesseract, ideas are not presented as ordinary service categories. They appear as moving objects, particles, constellations, pathways, portals, fragments of typography, campaigns, colours, grids and visual systems floating around the visitor.

The experience should show how AG Designs takes disconnected elements and brings them into one organised brand universe.

The visitor should gradually experience the transformation from:

- Noise to clarity
- Random posting to purposeful communication
- Disconnected ideas to a recognisable identity
- Content creation to brand building
- Visibility to meaningful positioning
- Chaos to creative direction

By the end of the journey, the scattered particles, ideas and visual fragments should come together to form a complete, confident brand system.

The visitor then exits the tesseract transformed.

A possible symbolic device is: The visitor enters through the A - The Aperture - and exits through the G - the completed orbit or gravitational system.

Explore whether this strengthens the narrative without making it feel forced.

AG Designs' key verticals

The website should communicate these capabilities naturally through the journey:

- 1 Brand strategy and positioning
- 2 Social media strategy and management
- 3 Branding and visual identity
- 4 Content creation, reels and campaign concepts
- 5 Photography, video and production
- 6 Website and digital experience design
- 7 Campaign planning, launches and growth communication

These should not appear as seven ordinary service boxes. Give each capability its own symbolic environment, object, constellation or moment inside the tesseract.

For example:

- Strategy could become a navigational system that gives the universe direction.
- Branding could become fragments that assemble into a distinct visual identity.
- Social media could become connected signals travelling across an expanding network.
- Content could appear as ideas gaining movement, sound and momentum.
- Production could become a space where abstract concepts take physical form.
- Websites could become portals into complete digital worlds.
- Campaigns could become energy waves expanding outward and reaching audiences.

These are starting points, not mandatory executions. Improve upon them.

Desired emotional journey

The visitor should feel:

- 1 Curiosity
- 2 Disorientation
- 3 Discovery
- 4 Possibility
- 5 Clarity
- 6 Confidence
- 7 Excitement to work with AG Designs

The experience should feel premium, intelligent, artistic and slightly surreal. It should not feel like a gaming website, a childish space theme or a stereotypical galaxy filled with rockets and astronauts.

Avoid obvious sci-fi clichés such as spaceships, neon planets, astronaut helmets and generic star fields.

The space should feel abstract and conceptual - more like travelling through ideas, dimensions, energy, typography and creative systems.

Brand personality

AG Designs should come across as:

- Strategically sharp
- Creatively fearless
- Curious
- Human
- Contemporary
- Playful without being childish
- Premium without being cold
- Confident without sounding arrogant

Avoid generic agency language such as:

- "We create magic"
- "We bring ideas to life"
- "Your one-stop creative solution"
- "We think outside the box"
- "Where creativity meets innovation"
- "Elevate your brand"

The copy should be concise, clever, conversational and memorable.

Your task

Create the complete storytelling concept for this website.

1. The Big Idea

Give the concept a compelling name and explain it in one powerful paragraph.

Also provide:

- A one-line website proposition
- A short internal creative manifesto
- The transformation the visitor experiences

2. The Opening Sequence

Write the first 20-30 seconds of the website experience.

Describe:

- What the visitor initially sees
- What appears on screen
- How the AG identity is introduced
- How the visitor approaches or interacts with the A

- How they are pulled into the tesseract
- Suggested opening copy
- Scroll, cursor, sound and movement behaviour

The opening must immediately create curiosity without explaining everything.

3. Complete Scene-by-Scene Journey

Create a cinematic website flow of approximately 8-12 major scenes.

For every scene, provide:

- Scene name
- Purpose in the story
- Visual environment
- Main animation or interaction
- What the visitor learns about AG Designs
- Exact or suggested on-screen copy
- How the scene transitions into the next one

The journey must include:

- The problem or fragmented brand state
- Entry through the A
- The tesseract reveal
- Strategy and positioning
- Branding and design
- Social media and content
- Production and execution
- Website or digital experience design
- Selected work or portfolio
- AG Designs' personality or team
- The transformed-brand moment
- Final contact call-to-action

4. Service Discovery System

Explain how visitors can explore AG Designs' verticals without breaking the cinematic experience.

Consider:

- Floating constellations
- Interactive pathways
- Objects that react to the cursor
- Portals inside the tesseract
- Optional user-controlled exploration
- A guided journey combined with free exploration

Explain how each service opens into relevant work, case studies and outcomes.

5. Portfolio Integration

Create a way to showcase projects without using a standard tiled portfolio grid.

The portfolio should feel like proof discovered during the journey.

For example, projects might appear as:

- Worlds created inside the tesseract
- Signals received from completed brand universes
- Floating visual artefacts
- Before-and-after transformations
- Case-study portals

For each project, the visitor should be able to understand:

- The client or brand
- The problem
- AG Designs' strategic idea
- What was created
- The result or impact

6. Website Copy

Write suggested copy for:

- Opening screen
- Tesseract entry
- Brand strategy
- Social media
- Branding and identity
- Content and production
- Websites and digital experiences
- Portfolio introduction
- About AG Designs
- Final call-to-action
- Loading screen
- Cursor prompts
- Hover instructions
- Page transitions
- Error or 404 page

Keep major headlines short enough to work inside an immersive visual experience.

Explore copy territories such as:

- "Lost in the noise?"
- "Enter A."
- "Inside, ideas find direction."
- "Strategy gives them gravity."
- "Design gives them form."
- "Content gives them momentum."
- "You don't leave with more noise. You leave with a brand."

Do not simply reuse these lines. Develop a stronger and more cohesive copy system around the concept.

7. Interaction and Motion Language

Define how the website should behave.

Include recommendations for:

- Scroll behaviour
- Cursor behaviour
- Object reactions
- Camera movement
- Scene transitions
- Typography in motion
- Sound design
- Micro-interactions
- Loading experience
- Portfolio navigation

Motion should support the story rather than exist only for visual spectacle.

8. Practical UX Layer

The experience must still be easy to navigate.

Recommend:

- Persistent navigation
- Skip-intro option
- Progress indicator
- Clear service access
- Portfolio access
- Contact access
- Mobile adaptation
- Reduced-motion version
- Lower-bandwidth fallback
- Accessibility considerations

The visitor should never feel trapped inside the experience.

9. Visual Direction

Describe the proposed visual language, including:

- Colour world
- Lighting
- Materials and textures
- Typography
- 3D forms
- Use of the AG identity
- Balance of darkness and colour
- How real portfolio assets enter the abstract environment

The space should feel editorial and sophisticated, not like a generic futuristic template.

10. Final Transformation and CTA

Create a strong final scene in which fragmented elements align into a complete brand system.

The ending should communicate that AG Designs does not simply produce posts or designs. It gives brands clarity, direction, consistency and a world they can own.

Write 5 possible final call-to-action lines that feel connected to the tesseraact narrative.

11. Developer and Designer Brief

Conclude with a concise production brief containing:

- Key pages or states
- Essential 3D assets
- Major interactions
- WebGL or animation requirements
- Content needed from AG Designs
- Recommended balance between WebGL and normal HTML content
- Desktop and mobile priorities
- Features that are essential
- Features that are optional enhancements

Do not begin by generating code. First build a clear, emotionally compelling and strategically relevant story that a creative director, 3D designer, UX designer, copywriter and developer can execute together.
